

Optional Project Part2

You don't have to submit this

Make a backup of the source code from previous phase of the project. And use the previous phase code as a starting point for this project.

1. We are going to write some classes to represent a school member.
 2. This can be:
 - a. Teaching staff or
 - b. Non-teaching staff or
 - c. Student.
 3. You would need to add some more classes, and also have a class hierarchy.
 4. The classes you should add are:
 - a. SchoolMember
 - b. Employee
 - c. Teacher
 - d. Admin, which will represent the non-teaching staff.
 - e. And you already have the Student and Course classes from before.
 5. You should add methods to these classes. This means you get to decide what methods should be on the base classes/derived classes, and which methods should be pure virtuals/virtuals/non-virtuals.
 6. In the next phase, we will add the capability to read information about school members from a text file.
